

## National Oil Company Database Data Update Summary – December 2025

In December 2025, the [Natural Resource Governance Institute](#) (NRGI) is publishing a data update of the [National Oil Company Database](#). This brief note explains the content of this data update. It can be read in conjunction with the [National Oil Company Database: Methodology Guide](#), which remains current as of this data update.

### Inclusion of additional data from newly-issued reports

With this update we include data from company and government reports that had not been published as of the data cut-off for the previous data update in May 2024. In total, this update includes company reports covering the years 2020 – 2024. In total the database as updated contains at least some data from 8 of the 71 national oil companies (NOCs) in the database for fiscal year 2024.

Where it was available, we include the available 2024 reporting in this update. The revised database therefore now includes data covering the years 2011-2024. We plan to publish an additional data update in early 2026 which will include additional reporting for 2024 and other years.

Altogether, the update captures new reports covering 52 company-years (for 34 total companies) not available in the previous data update.

The appendix details the company-years for which new reports were published during this update period. The cut-off date for this December 2025 Update was 30 April, 2025.

### Updates and corrections of existing data

The revision also includes some updates to data points that appeared in the database as of the prior update. In some cases, we added individual indicators where available data had previously been missed, or corrected individual indicators where we became aware of a calculation or transcription error. We did not alter the definition or interpretation of any indicators during this data update.

Where we updated data gathered directly from company and government reports, we also updated the data derived from those indicators. For example, changes to an indicator for a company's revenue from non-core activities for a particular year would also, in most cases, result in changes to the corresponding indicator for total revenue. Changes to an indicator for a company's operational expenditures would result in changes to the corresponding indicators for net income from core revenues and net income from all revenues.

## Appendix. New reports captured in December 2025 data update

Company	Country	Years for which reports previously unavailable are captured in December 2025 update				
		2020	2021	2022	2023	2024
